

## Desktop Memorial

The Desktop memorial is designed for the placement of cremated remains, below ground. The decorative unit houses a granite memorial plaque for inscription purposes and can be inscribed and ready to fix at the time of interment.

Subsequent interments are made by simply removing the plaque, giving direct access to the burial chamber.

The concrete chamber is situated beneath each memorial unit. The vault can accept up to four cremated remains caskets.

## Example Cemetery

# Desktop Memorials

with below ground  
cremated remains vaults

Below ground vaults provide clean burial facilities in all weathers.

Access to the vault is made through the Desktop housing.

Cover plates are secured with anti-tamper locking screws.

Inscriptions can be prepared for the day of the funeral.

Please feel free to visit the cemetery where our staff will be glad to assist with any enquiries.
